

PHISHING AWARENESS TRAINING

CodeAlpha Cyber Security
Internship - Task 2

Prepared By : Fatima Saleem

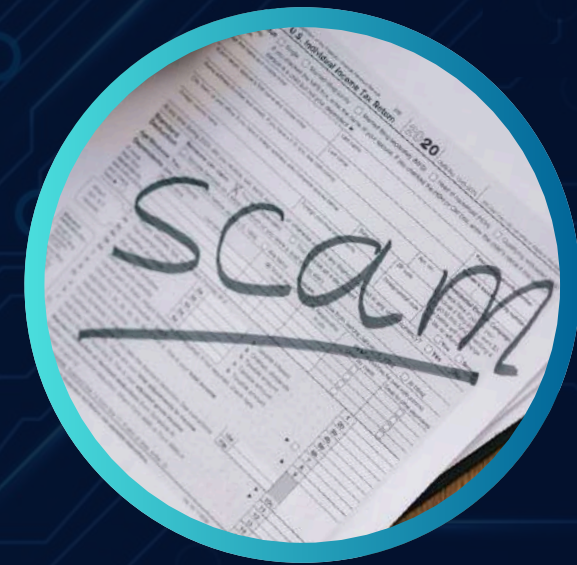

What is Phishing?

Phishing is a cyberattack where attackers pretend to be trusted organizations to steal sensitive information such as passwords, bank details, and personal data through emails, messages, or fake websites.

Common Types of Phishing

- Email Phishing
- Spear Phishing
- Smishing (SMS Phishing)
- Vishing (Voice Phishing)
- Clone Phishing

Phishing

Fake messages or emails
used to steal personal
information

Social Engineering

Social Engineering is the psychological manipulation of people into revealing confidential information.

Attackers use:

- Urgency
- Fear
- Curiosity
- Fake rewards
- Trust in well-known brands

How to Identify Phishing Emails

- Check the sender's email address
- Look for spelling and grammar mistakes
- Avoid clicking suspicious links
- Beware of urgent requests
- Never open unknown attachments

Fake Websites Practices

Signs of Fake Websires:

- Incorrect Website Address (URL)
- No HTTPS lock icon
- Poor website design
- Unexpected logic pages
- Requests for personal information

Update systems regularly

Incorrect web Address

Best Practices

Verify Suspicious
Emails

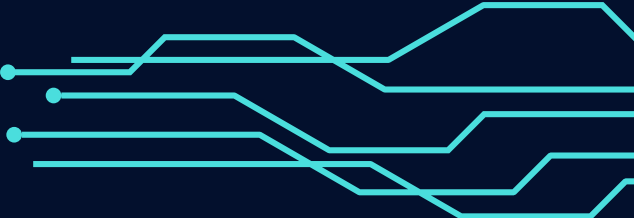

Never Share
Passwords

Enable Multi-Factor
Authentication(MFA)

Report Phishing
attempts

Real – World Example

Example: An attacker sends an email pretending to be from a bank asking the user to verify their account. The email contains a fake login page that steals usernames and passwords.

- ✓ Suspicious emails
 - ✓ Threats can happen anytime
 - ✓ Prevention starts with awareness
 - ✓ Users play a vital role
- 
- 

Quiz
